Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	NovaMind
Project / Solution Name	FuturePath AI
Name (Leader)	Christopher Gan Wei Hong
Email & Phone (Leader)	chgan775@gmail.com
University Affiliation(s)	Asia Pacific University (APU)
Live Prototype URL	https://futurepath-ai.replit.app/
Code Repository URL (public / access granted to judges)	https://github.com/AhmedAlshafah/futurepath-ai

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

FuturePath AI is a web-based career guidance application developed using Python, Streamlit, HTML, CSS and JavaScript, and deployed through Replit.

The frontend collects users' skills and interests and provides interactive career guidance experience. The Python backend uses a weighted skill-alignment algorithm to compare users' skills against six predefined career benchmarks stored in CSV files.

The career skill benchmarks are derived from O*NET and additional research sources. The application also uses a dated job-market snapshot collected from the Himalayas Remote Jobs API to provide contextual employment information.

The results include ranked career matches, matched and missing skills, and learning plans with educational resources. The application supports downloading learning plans. No generative-AI model is required for the current matching calculations.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
Python	Application entry point, backend matching, CSV processing and data-collection scripts	Python Software Foundation License
Streamlit	Web application framework, session state and custom-component hosting	Apache License 2.0
Pandas	Declared project dependency for tabular-data work; not the core matching algorithm	BSD 3-Clause

Name & Version	Purpose in Project	License
HTML5 and CSS	Custom interface structure, responsive styling and print layout	Web standards; not separately licensed third-party libraries
JavaScript	Interface interaction, communication with Streamlit and browser print export	Language standard; not a separately licensed third-party library

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Himalayas Remote Jobs API	Collect remote-job listing observations for the dated market snapshot	Free Public API

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Cloud hosting, compute and prototype development	Sponsor-provided tier
GitHub	Source code hosting and version control	Private repository

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
None			

None — the current prototype uses a deterministic weighted skill-alignment algorithm rather than an embedded AI model.

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Himalayas Job Listing Dataset	Kaggle/Public Source	Public	Open Data Commons/CC0	N
AI Open Roles	https://aiopenroles.com/insights/how-to-become-a-machine-learning-engineer/	Public	Open N/A	N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Microsoft	https://learn.microsoft.com/en-us/credentials/certifications/.../az-104	Public	Open N/A	N
HRD Corp	https://hrdcorp.gov.my/wp-content/uploads/.../1_2020_INDUSTRY-TRAINING-INTELLIGENCE-REPORT.pdf	Public	Open N/A	N
Oracle	https://www.oracle.com/careers/software-engineer/	Public	Open N/A	N
O*NET Online	https://www.onetonline.org/link/demand/15-1252.00	Public	Open N/A	N
CISA	https://www.cisa.gov/careers/work-rolescyber-defense-analyst	Public	Open N/A	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Replit AI	Code completion, debugging and framework scaffolding	Moderate
Chat GPT	Brainstorming UI layouts	Minor
Gemini Pro	Drafting documents	Minor

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

The team reviewed AI-assisted changes, compared integration against the team backend and tested application flows. Backend matching remains the source of displayed scores rather than a separate frontend calculation. Automated checks and manual runs were used to check matching, CSV integration and interface behaviors. Team members remain responsible for the final code, source attribution, data accuracy and deployment. AI-generated suggestions were not treated as authoritative evidence of dataset licenses or production readiness.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Platform	Used as the primary Integrated Development Environment (IDE) to write code and host/deploy the live prototype

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

The Replit platform was highly essential for our rapid prototyping, collaboration, and immediate web deployment. While the underlying Python/Streamlit code could theoretically be hosted on another cloud provider (like AWS or Heroku), Replit allowed us to bypass complex deployment pipelines and share a live, working URL directly with the judges effortlessly.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

FuturePath AI processes user-selected skills, interests and optional profile information to generate career recommendations. The current prototype uses temporary application session data rather than maintaining a permanent user-profile database. The application is hosted through Replit, and career recommendations are calculated using the Python backend and locally available research datasets.

The team does not intentionally maintain a persistent database of user profiles. Users are advised not to upload confidential personal information. Data handling and session retention depend on the final deployed configuration.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

The prototype uses a dated snapshot of remote job listings, which does not represent the complete employment market or predict future hiring demand. Career recommendations are based on selected skills and team-defined skill weights, rather than verified professional competence.

The matching algorithm may not recognize every alternative skill name or accurately interpret all information in uploaded text. The team addresses these limitations by displaying transparent skill-alignment scores, matched and missing skills, source references and the market-data retrieval date. Future improvements will include broader datasets, user validation and more advanced skill recognition.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
